

# Technology and Politics

PHIL 4310 - Philosophy of Technology

# technology, choices, and values

- ✦ What problems to solve, what questions to ask.
- ✦ How to gather data to support solutions and answers.
- ✦ What solutions to propose, and how to design them.

# ethics, politics, and design

- ✦ Moral and political properties of artifacts and designs
- ✦ The responsibilities of the designer
- ✦ What technology tells us about ethics

how can artifacts or designs  
be moral or political?

# Langdon Winner

“What matters [in politics] is not technology itself, but the social or economic system in which it is embedded.” (251)

Sociological Reductionism

# Evidence of Technology's Political Properties

- ✦ “Large-scale momentum of sociotechnical systems”
- ✦ Response of society to “technological imperatives”
- ✦ Transformation of human ends by technical means. (p. 252)

(1) using technology to  
settle a political issue

“Many of his monumental structures of concrete and steel embody a systematic social inequality, a way of engineering relationships among people that, after a time, became just another part of the landscape.” (253)

“As far as I know, no one argued that the development of the tomato harvester was the result of a plot... What we see here instead is an ongoing social process in which scientific knowledge, technological invention, and corporate profit reinforce each other in deeply entrenched patterns, patterns that bear the unmistakable stamp of political and economic power. Over many decades agricultural research and development in U.S. land-grant colleges has tended to favor the interests of large agribusiness concerns.”(255)

"The things we call 'technologies' are ways of building order in our world. Many technical devices and systems important in every day life contain possibilities for many different ways of ordering human activity. Consciously or unconsciously, deliberately or inadvertently, societies choose structures for technologies that influence how people are going to work, communicate, travel, consume, and so forth over a very long time." (256)

(2) inherently political  
technologies

# Friedrich Engels

“The automatic machinery of a big factory is much more despotic than the small capitalists who employ workers have ever been.”

- Engels (quoted by Winner, K:257)

“If man, by dint of his knowledge and inventive genius, has subdued the forces of nature, the latter avenge themselves upon him by subjecting him, insofar as he employs them, to a veritable despotism independent of all social organization.”

- Engels (K:257)

“no reasonable person believes that ships can be run democratically” (K: 257)

“In this conception some kinds of technology require their social environments to be structured in a particular way in much the same sense that an automobile requires wheels in order to move. The thing could not exist as an effective operating entity unless certain social as well as material conditions were met.” (258)

strict requirement vs. strong  
compatibility

internal vs. external  
politics

“The issue here does not concern how many jobs will be created, how much income generated, how many pollutants added, or how many cancers produced. Rather, the issue has to do with the ways in which choices about technology have important consequences for the form and quality of human associations.”

(K: 259)

# How artifacts can have political properties

1. Designed to settle a political issue.
2. Inherently political technologies

mediation approach

Peter-Paul Verbeek

AT PLAY**

What are the responsibilities  
of the designer?

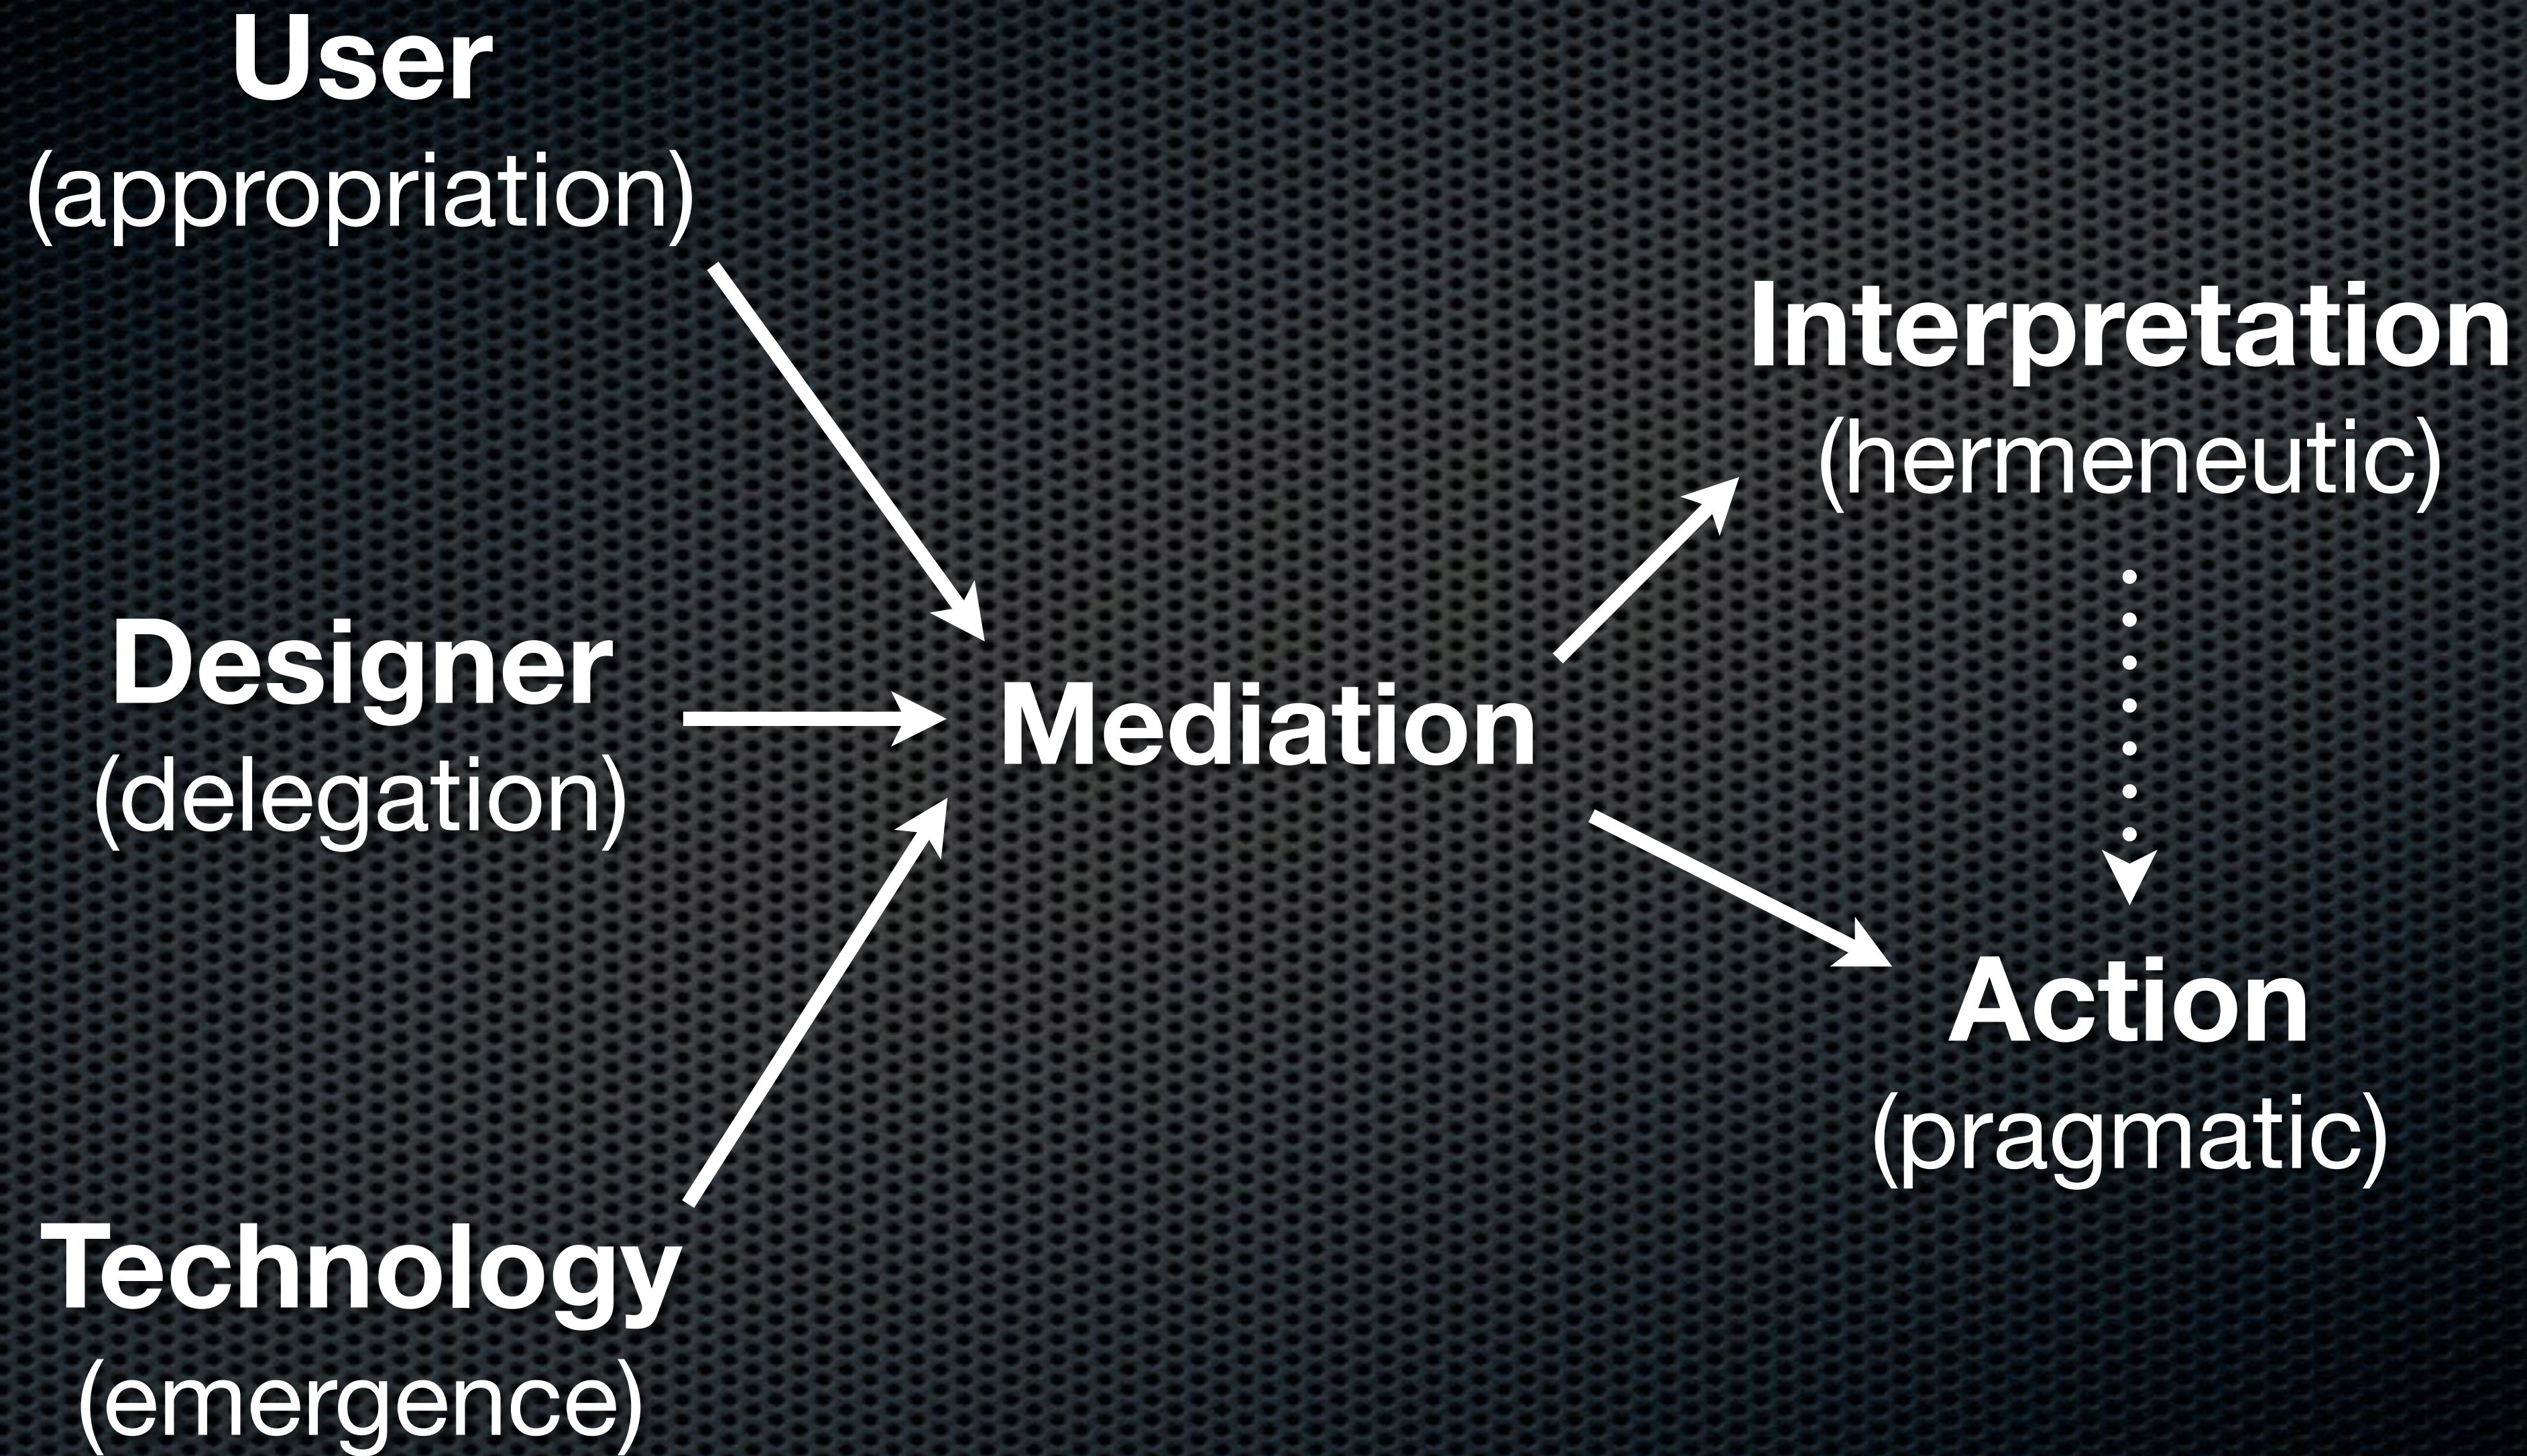

Who is responsible?  
Designer or User?

“moral imagination”

What can technology bring  
to ethics?
